Subject: EMF Site Groundwater Monitoring Well Installations

Dear Cynthia:

In response to your April 27, 1999 letter, Boeing Environmental Affairs is planning to install three new groundwater monitoring wells (12, 13 and 14) at the locations specified on the enclosed map around the end of June. The two wells first proposed in my March 18th correspondence will be located further to the northwest and southeast of well 11D than originally planned. In addition, a third well will be installed to further characterize groundwater conditions at the site.

For your information, Boeing Environmental Affairs describes well 13 as being installed approximately 50 feet to the southeast of well 11D. Wells 12 and 14 will be located adjacent to the current shallow wells (4 and 2 respectively) to identify the lateral and vertical extent of groundwater contamination to the northwest and southeast. Based on recently performed Geoprobe sampling, these new deep wells will be screened from a depth of 35 to 40 feet below ground surface, below which an apparent confining silt layer was encountered.

Boeing plans to perform its quarterly groundwater monitoring in July, and will include these wells in the groundwater sampling program. Laboratory results should be available by the end of July, and will be provided to King County when completed. Upon completion of the monitoring well installations, these wells will be surveyed to determine locations and top of casing elevations.
